

Wagners Composite Fibre Technologies (CFT)

Park Shelters

Create smarter, longer-lasting outdoor spaces with park shelters designed for performance in Australia's toughest environments. Constructed from advanced Fibre Reinforced Polymer (FRP), Wagners shelters are engineered to be exceptionally durable and inert, delivering reliable performance where traditional materials often fall short.

Resistant to termites, corrosion, and the damaging effects of acid sulfate soils, they provide a dependable solution for parks, coastal areas, and remote locations alike. Lightweight by design, these shelters are easy to handle, transport, and install helping reduce project timeframes and on-site costs. Their modular construction allows for efficient assembly and flexible configurations, making them suitable for a wide range of applications and site conditions.

Non-leaching and environmentally conscious, Wagners FRP shelters maintain their strength and appearance over time. With minimal maintenance requirements and extended service life, they offer a cost-effective alternative by reducing ongoing upkeep and replacement cycles.

Wagners CFT Park Shelter solutions are constructed from Square Hollow Sections (SHS), Rectangular Hollow Sections (RHS) and Circular Hollow Sections (CHS) which are certified Australian Made.

Performance Advantages

Durable with an expected 100-year design life

Inert will not rot, rust and corrode

Resistant to termites and acid sulfate soils

Lightweight, making it safer to handle, transport and install

Modular by design so can be assembled off-site and craned into place saving you onsite time and expenses whilst reducing weather impacts to your project

Non-leaching, so will not release harmful substances into the environment making it suitable for areas of high conservation value

Budget friendly – with reduced maintenance and replacement cycles resulting in significant savings over the lifetime of the structure

Plus structures made from FRP contribute to decarbonisation in construction and reducing global warming through **less embodied carbon**.
