TIMBER REHABILITATION

COOKTOWN WHARF - AFTER

At times, rehabilitation rather than complete replacement of an asset is more appropriate. To ensure safety and longevity of a rehabilitated asset, Wagners have developed a timber replacement system. The system can either replace damaged and deteriorated timber components or provide a complete overhaul of the whole structure.

Flexible design options and ease of installation means a Wagners composite product ensures the best possible project outcome in the face of harsh environments with minimal maintenance required.

Wagners composite fiber can be used to replace girders, corbels, headstocks, whalers, bracing, handrails, and repair piles.

PERFORMANCE ADVANTAGES

- » Designed and built to local authority standards
- » Quick and easy installation
- » Lightweight
- » Termite and borer proof
- » Resistant to acid sulphate soils
- » Inert, environmentally stable material
- » More sustainable than timber across the whole life-cycle

WAGNERS COMPOSITE PRODUCTS WILL NOT RUST, ROT OR CORRODE.

WAGNERS

Composite Fiber Technologies (CFT)

TIMBER REHABILITATION

DESIGN

- » Designed for North American codes and conditions
- » Designed in accordance with maritime structure specifications
- » Members designed with capacity and stiffness equal to or better than timber sections

**LOW MAINTENANCE ASSET
WITH A LONG LIFE SPAN.**

LIFESPAN AND WARRANTY

- » Consistent properties, engineered material with well understood characteristics
- » Color-fast: Durability rating as 'extra long term'
- » Seven years full replacement warranty

**WAGNERS CAN PROVIDE ON-SITE
SUPPORT FOR INSTALLATION.**
